COMPANY PROFILE

Electric vehicle manufacturer

Located in Southwest France, in just a short space of time, Goupil Industrie has become the French leader in designing and manufacturing light electric utility vehicles.

We have proven with our clients that electric vehicles are the ideal solution for short-range travel and carrying out works.

The success of the G3 product range stems from its ability to adapt to the market, with a combination of product performance, reliability and excellent customer service.

CONCEPT & DESIGN

Designed to meet industrial level requirements, the G3 range is above all, a specialist tool that can be adapted to carry out numerous tasks, for different business and organisation types, in a range of different environments.

In addition to its unique technical functions, the G3 is structurally strong and can easily support the weight of the battery as well as a payload of up to 700Kg (depending on the size of the battery this limit may decrease slightly)

The electric tail/fork lift technology is environmental friendly and simple to use as well economic to run and maintain.

A choice of battery size is available, depending on power level needed and individual client requirements.

THE ADVANTAGES OF THE G3

The ideal solution for short-range travel and works.

> Unbeatable Manoeuvrability

Being the smallest vehicle in its category (1.10m wide) and with 3 m turning radius, the G3 is the most agile, compact vehicle for use in narrow spaces.

> Adaptability & Versatility

The Goupil G3 can be adapted to suit the individual needs of each user, whether for maintenance, logistics, cleaning, leisure & tourist sites, military sites, industrial sites or green spaces, and can be fitted with different bodies and equipment: pick-up, tail-lift, tippers, curtainsides, dropsides, skip, refrigerator (isothermal van), canvas etc.

> Reliability & Durability

The Goupil G3 has been designed to provide performance and reliability and electric power is the ideal energy source for stop and go use and travelling short distances.

> Efficiency and Cost Effectiveness

Thanks to low maintenance and recharging costs, using electric power can help cut costs for any business or organisation, making the G3 not only an environmentally friendly solution, but also an economical one..

RANGE OF EQUIPMENT

Pick-up

Canvas Van

Van with shutter

Tipping deck

Tipper with lambo doors

Tipper

High pressure cleaner

Watering and spraying
